

ABSTRACT OF THE DISCLOSURE

PORTABLE WIRELESS COMMUNICATIONS SYSTEMS

5 The invention provides a system for wireless transmission
of data, including position data. The system includes a hand
held digital computer, a position-locating device providing
position information to the digital computer and a VHF and/or
UHF radio frequency transmitter. A radio modem, having an
input for digital data from the hand held digital computer and
10 an output connected to the transmitter, includes a modulator
for converting digital data from the computer into a modulated
analogue RF signal for transmission.
